During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw:, SWISSPROT: TT:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence

AL Submitted (19-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 18A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk requests: clonerequest@sanger.ac.uk Population of the compared from overlapping clones. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMEL; Sw:, SWISSPROT; Tr., TREMEL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    88802 CGGCCTCCCAAAGTGCTGGGATTACAGGC 88774
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   φ,

conservation of the transmin services process.

Considering in seventing, treating or ameliorating a medical condition. The susceptibility to a pathological condition in a subject. The protein is condition in a subject in a pathological condition in a subject. The protein is condition in a subject. The protein is useful for condition in a subject. The protein is useful as reagents for condition in a subject. The protein is useful as reagents for differential identification of the tissues or cell types present in a condition or a susceptibility to pathological condition in a subject. The protein is useful as reagents for condition in a subject. The protein is useful as reagents for differential identification of the tissues or cell types present in a condition or decreased levels of for the set in the types present in a condition of the tissues or cell types present in a condition of the tissues or cell types present in a condition of the tissues or cell types present in a condition of the tissues. The protein, to activate the activity of polypeptides, e.g. haemoglobin so receptor, to activate the activity of membrane bound receptor by competing condition, to reduce the activity of membrane bound receptor by competing conditions, to reduce the activity of membrane bound receptor by competing conditions useful for treating, soluble tumour necrosis factor (NMP) conditions e.g. blood vessel growth inhibition, enhancement of immune conditions of of immune system involving abnormal growth of specific types of cells as conditions of other cell types where expression has been observed. The protein, the nucleic acid and antibodies are useful for treating, preventing, detecting, diagnosing disorders (such as peripheral artery disease, limb conditions of immune system, hyperproliferation, neurological disease (such as Alzhaimer's cid-heart defects, etc), neovascularisation disorders, wound healing and cell, infectious disease, Huntingron's disease, sania, dementia, etc. The present sequence represents a cDNA encoding a no

(a) cancer, e.g. breast and ovarian cancer and other cancers of the
adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
lung or urogenital; (b) immune disorders e.g. Addison's disease,
allergies, autoimmune haemolytic anaemia, autoimmune thyroiditts,
diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
arthritis and ulcerative colitis; (c) cardiovascular disorders such as
myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
bacterial, fungal and parasitic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel human genes (ABZ66891-ABZ68209) and the encoded secreted proteins (ABP99470-ABP99872) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; secreted protein; nootropic; neuroprotective; cytostatic; virucide; dermatological; immunosuppressive; antiinflammatory; anti-HIV; vulnerary; antibacterial; antiparkinsonian; antisickling; antianaemic; antianthritic; cancer; antirheumatic; hepatotropic; cerebroprotective; antiinflammatory; antiallergic; antidiabetic; antiinflammatory; antiallergic; antidiabetic; antifugal; antiparasitic; cardiant; immune disorder; infection; vaccine; cardiovascular disorder; neurological disease; nephrotropic;

ABZ73698-ABZ74687 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening and recombinant vectors and host cells comprising a muleic acid of the invention. The secreted proteins are thought to be involved in biological activities associated with cellular signalling, cellular differentiation, cell migration, prohormone activation and neurotransmitter activity. The secreted proteins, mucleic acids encoding them, antibodies or antibody fragments specific for the secreted protein, and modulators of protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   activity are useful for diagnosing of treating cancers or other hyperproliferative disorders. Additionally, the secreted proteins and their nucleic acids may also be used in the treatment of autoimmune disorders, inflammatory disorders, diseases involving angiogenesis, AIDS (acquired immunodeficiency syndrome), hepatitis, anaemia, and to promote wound healing. Nucleic acids of the invention may be used for chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             identification, chromosome mapping, in gene therapy, for identifying individuals from minute biological samples, as hybridisation probes, and as molecular weight markers. The present sequence represents a human secreted protein genomic fragment referred to in the disclosure of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human secreted proteins and nucleic acids, useful for detecting or treating cancer or other hyperproliferative disorders, autoimmune disorders, inflammatory disorders, HIV disease, hepatitis or anemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 58181 BP; 15503 A; 12755 C; 13504 G; 16419 T; 0 U; 0 Other;

The present DNA sequence was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 58181 BP; 15503 A; 12755 C; 13504 G; 16419 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABL66806/c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABI61664
CC to ABI/70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC anti-neoplastic agent, and can be used for producing a product which is
CC anti-neoplastic agent, and can be used for producing a product which is
CC anti-neoplastic agent, and can be used in the treatment of cancer such
CC properties of the agent. M1 can be used in the treatment of cancer such
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

Screening for anti-neoplastic agent involves exposing agent to be tested for anti-neoplastic activity, and cin expression of a gene of a signature gene set. and determining a change

Claim 1; SEQ ID NO 5143; 44pp; English.

The present invention describes a method (M1) for screening for an anticc neoplastic agent. The method involves exposing cells to a chemical agent
to be tested for anti-neoplastic activity, determining a change in
cc expression of at least one gene (I) of a signature gene set, where (I)
cc expression is indicative of anti-neoplastic activity. (I) has cytostatic
expression is indicative of anti-neoplastic activity. (I) has cytostatic
activity and can be used in gene therapy. M1 can be used for screening an
anti-neoplastic agent, and can be used for producing a product which is
the data collected with respect to the anti-neoplastic agent as a result
of M1, and the data is sufficient to convey the chemical structure and/or
properties of the agent. M1 can be used in the treatment of cancer such
as colon, breast, stomach, lung, thyroid, oscophageal, ovarian, kidney,
prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous center, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papiliary carcinoma and Wilm's

                                                                                                                               cc neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in cxpression of at least one gene (I) of a signature gene set, where (I) cc comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in cx ABL70110), or is at least 95% identical to (S), where a change in cx activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is ct the data collected with respect to the anti-neoplastic agent as a result cof MI, and the data is sufficient to convey the chemical structure and/or properties of the agent, lung, thyroid, oesophageal, ovarian, kidney, crostate or panoreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's tumous colors.

Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.

Claim 1, SEQ ID NO 646; 44pp; English.

The present invention describes a method (MI) for screening for an anticonsplastic agent. The method involves exposing cells to a chemical agent
to be tested for anti-neoplastic activity, determining a change in
expression of at least one gene (I) of a signature gene set, where (I)
comprises a sequence (S) selected from 847 sequences (given in ABL6164
consprises a sequence (S) selected from 847 sequences (given in ABL6164
consprises a sequence (S) selected from 847 sequences (given in ABL6164
consprises a sequence (S) selected from 847 sequences (given in ABL6164
consprises a sequence (S) selected from 847 sequences (given in ABL6164
consprises a sequence (S) selected from 847 sequences (given in ABL6164
consprises a sequence (S) selected in can be used for producing a product which is
the data collected with respect to the anti-neoplastic agent as a result
of M1, and the data is sufficient to convey the chemical structure and/or
properties of the agent. M1 can be used in the treatment of cancer such
as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

Sequence 145831 BP; 37379 A; 35440 C; 35158 G; 37854 T; 0 U; 0 Other;

밁 \$ 문 Matches The present invention relates to methods of diagnosing breast cancer in a patient, which comprise detecting the level of expression in a tissue sample of two or more genes selected from those shown in ABT09867-ABT1112, where a differential expression of the genes indicates breast cancer. The methods are useful in diagnosing, treating, detecting the progression, and in monitoring treatment of breast cancer in patients. The methods are also useful as a screening tool for agents that modulate the onset or progression of breast cancer. The breast cancer genes may be used as diagnostic markers for the prediction or identification of the malignant state of breast tissue, for confirming the type and progression of cancer, and for drug screening and assays. The present sequence is a coding sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in the twice in the part of the printed specification, but was obtained in Sequence 145831 BP; 37379 A; 35440 C; 35158 G; 37854 T; 0 U; 0 Other; Diagnosing breast cancer in a patient comprises detecting the level of gene expression in cell or tissue samples, where a differential gene expression is indicative of breast cancer.                                                                                                                                                                                                                                                                                                                                                                                                         CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cactivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) inserting the CC polynucleotides may be used to produce the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK5492 to AAK5999 genomic CC represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                     Matches

The invention relates to novel genes (AAI62752-AAI62961) and proteins (AAM42347-AAM42415) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic

Novel plasma membrane associated proteins useful for diagnosing, treating, preventing and/or prognosing disorders related to the including cancer, immune response and neuronal disorders.

proteins,

WPI; 2001-476225/51.

Claim 8; SEQ ID NO 13457; 2537pp + Sequence Listing; English

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising complementary ç

                                                                                                 Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel dis Crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human cDNA differentially expressed in granulocytic cells #133.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence'3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the protesins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH18628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB55893 represent human amino acid sequences; and AAH13629 to AAH13632 represent

                                                                                                                                                                                                                                                                                                                                                                                   CC expression level to an expression level in an unactivated GC, where cdifferential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the CC expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a CC pathogen or sterile inflammatory disease using the gene expression of the terrile inflammatory disease using the gene expression or compatible; (3) detecting (M4) an inflammation (especially chronic) in a CC pathogen or sterile inflammatory disease, by detecting the level of CC pathogen or sterile inflammatory disease, by detecting the level of compatible; (a) gene (s) from Gs, where the level of expression of the gene is indicative of inflammation; (4) treating CC (M5) an inflammation (especially chronic) or in a tissue, an allergic configuration of the gene is indicative of inflammation; (4) treating CC (M5) an inflammation (especially chronic) or in a tissue, an allergic configuration of the gene is indicative of inflammation; (4) treating CC (M5) an inflammation (especially chronic) or in a tissue, an allergic configuration of the expression of gene(s) from Gs in the tissue. M1 (c) is useful for detecting GA; M3 is useful CC (some strend of a subject, exposure of a subject, exposure of a subject condition; (4) treating GA; M3 is useful CC (exposure of a subject to a pathogen or sterile inflammation with an inflammation or sterile inflammatory disease (e.g. psocially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. conditions. The present sequence, inflammatory bowel disease, Croth's conditions. The present sequence infection, protozoal infection, conditions. The present sequence represents a gene differentially exposure of a subject of the above of the above of the printed specification, but was obtained in electronic format directly from WIPO at

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Wang, David G.

TITLE OF INVENTION: Identification and Mapping of Single Nucleotide

TITLE OF INVENTION: Polymorphisms in the Human Genome

FILE REFERENCE: 108827-129

CURRENT APPLICATION NUMBER: US/10/027,632

CURRENT FILING DATE: 2002-04-30

PRIOR APPLICATION NUMBER: US 60/218,006

PRIOR APPLICATION NUMBER: US 60/198,676

PRIOR APPLICATION NUMBER: US 60/193,483
